SUMMARY

Information security specialist with a unique programming background. Professionally trained in vulnerability management and penetration testing. Experienced project manager focusing on vulnerability remediation and business decision implementation.

EXPERIENCE

pentaROOT Information Security 2018 – Present

Founder/Consultant

- Provides services in vulnerability management, automation, security architecture, and penetration testing
- Current clients include Fortune 500 companies in technology, manufacturing, and healthcare
- Recent work includes being tasked to lead teams of more than 10 employees, build vulnerability management programs from scratch, and implement governance and compliance programs
- Additional services offered as needed such as a technical contact for post-testing remediation and training for internal employees

Banner Health

Information Security Consultant – Vulnerability Management/Penetration Tester 2016 – 2018

- Created and maintained all policies, procedures, and runbooks surrounding vulnerability management, asset identification, vulnerability remediation, vulnerability assessments, and penetration testing adhering to government regulations and HIPAA compliance
- Conducted routine testing on more than 140 externally facing devices; ad-hoc testing internally and for 3rd party applications
- Lead and coordinated with all 3rd party penetration testing efforts including contracting, scoping, rules of engagement, testing, and reporting
- Lead nine teams in remediation projects following vulnerability identification from vulnerability management program, internal penetration testing, and 3rd party penetration testing
- Created executive and technical reports on penetration testing, vulnerability findings, and recommendations presented to executive management throughout multiple stages of the lifecycle
